

Final Project: Initial Analysis Report

Write a 2-3 page paper that summarizes your preliminary analysis. This report should include:

- Identification of the methods used along with justification for those methods
- Your R code and outputs
- Interpretations of the outputs and results, including preliminary answers to questions posed in the data selection assignment.

Complete a preliminary analysis of your chosen data set. Submit the results of your initial analysis in a report format. Include a statement about your chosen method for further analysis which will be completed for final submission. It also should follow APA format with at least 1,000 words (excluding title page and references page) and references page. In the body of your project you should incorporate the R codes and R outputs with interpretation of your results. Finally, you need to make sense of your results and make good points with proper conclusions.
